### PROFESSIONAL SUMMARY

Agentic AI Engineer who ships AI that runs in production. I design multi-agent systems, RAG pipelines over private documents, and MCP servers that expose business systems to LLM agents, and I build the FastAPI and Next.js applications around them. Currently leading the AI division at Webotech Studio; 5 verified Panaversity/PIAIC AI exams (74% average); pursuing an MS in Data Science.

### CORE SKILLS

|                    |                                                                                                                               |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------|
| AI & Agents        | OpenAI Agents SDK, CrewAI, LangChain, MCP Servers, RAG, LiteLLM, Gemini, Claude, Groq, Pinecone, Prompt & Context Engineering |
| ML & Data          | TensorFlow, PyTorch, scikit-learn, Pandas, NumPy, OpenCV, NLP                                                                 |
| Backend & Frontend | Python, FastAPI, Django, TypeScript, Next.js, React, PostgreSQL, MongoDB                                                      |
| Tooling            | Docker, Git, GitHub Actions, Vercel, Streamlit, Chainlit, n8n                                                                 |
| Languages          | English (professional), Urdu (native)                                                                                         |

### PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                             |                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| Lead AI Engineer — Webotech Studio                                                                                                                                                                                                                                          | Sep 2025 – Present  |
| <ul style="list-style-type: none"><li>Lead the AI and automation division: ML models, AI agents, chatbots and custom integrations for client operations.</li><li>Architect and ship agent systems and conversational assistants across client projects.</li></ul>           |                     |
| Agentic AI Engineer — Semantechs                                                                                                                                                                                                                                            | Jan 2026 – Present  |
| <ul style="list-style-type: none"><li>Design and deploy agentic systems for enterprise clients: multi-agent orchestration, planner/executor patterns, reliable tool use.</li><li>Build MCP servers that connect internal business systems directly to LLM agents.</li></ul> |                     |
| Senior Software Engineer — 7Star Laptop Battery Station                                                                                                                                                                                                                     | Jan 2026 – Present  |
| <ul style="list-style-type: none"><li>Engineered the POS suite used in daily retail operations: sales, stock and reporting.</li><li>Built warehouse stock applications and the 7starbattery.pk e-commerce platform.</li></ul>                                               |                     |
| SaaS Application Developer — OptifyServe, Dubai, UAE                                                                                                                                                                                                                        | Feb 2026 – Jun 2026 |
| <ul style="list-style-type: none"><li>Full-stack development of a UAE-based business optimization and automation SaaS platform (Next.js, TypeScript, FastAPI, PostgreSQL), from schema design to deployment.</li></ul>                                                      |                     |
| AI Engineer Intern — Innovidio                                                                                                                                                                                                                                              | Mar 2025 – Jul 2025 |
| <ul style="list-style-type: none"><li>Contributed to agentic AI automation systems and the Qyra AI research platform.</li></ul>                                                                                                                                             |                     |

### SELECTED PROJECTS

|                                                                                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Islamic Inheritance MCP Server (Python, FastMCP, ReportLab) — MCP server exposing a <i>calculate_inheritance</i> tool; outputs Hanafi cash and land shares (down to fractional Marla) as a PDF report. |
| Document Query Assistant (RAG) (Python, Gemini, GroundX, Streamlit) — upload documents, ask questions, get grounded answers with citations.                                                            |
| Market Trends Analyst Agent (Python, CrewAI) — multi-agent system that gathers market data and writes an analyst-style trend report.                                                                   |
| Weather Agent (OpenAI Agents SDK, Chainlit, Gemini) — conversational agent using function calling against a live weather API, with a streaming UI.                                                     |
| Hospital AI Assistant (Python, FastAPI, OpenAI Agents SDK) — SaaS-based organizational “brain” that automates hospital workflows with AI agents.                                                       |

### EDUCATION

|                                                                                         |                |
|-----------------------------------------------------------------------------------------|----------------|
| MS Data Science (in progress) — The Islamia University of Bahawalpur                    | 2026 – Present |
| BS (ADP) Artificial Intelligence — The Islamia University of Bahawalpur, CGPA 3.48/4.00 | 2022 – 2024    |
| BCS, Computer Science — Govt. Degree College, Dunyapur                                  | 2019 – 2022    |
